GREAT STEP FOR WIRELESS SYSTEM

Peter Cooper Hewitt's Discovery May Enable Marconi Soon to Fulfill His Promise.

TWO PHENOMENA DISCOVERED.

Resistance of Mercury Vapor to the Passage of Electric Current Disappears When Certain Potential Is Attained.

REPUBLIC SPECIAL.

New York, Feb. 21.-These interested in the application of wireless electricity to commercial purposes were discussing to-day the invention of Peter Cooper Hewitt, Experts declared that the interrupter invented by Mr. Hewitt would place in the hands of the owners of wireless telegraph systems an instrument which would insure greater socuracy end rapidity of transmis-sion and make possible the use of such pow-

crule currents that the intention of Mar-coni girding the earth with a wireless mes-age would be the sconer realized. The invention consists of a glass globe. Sout 10 inches in diameter, to the base of Thich are sealed two tubes containing mer-cury. It makes possible very powerful, tanid and continuous oscillations to be set cury. It makes possible very powerful, rapid and continuous oscillations to be set up in the autenia, or sending mast, and renders it easy to send messages over great distances and with some legree of secreey. The operation of this device depends upon two new phenomena in physics, discovered by Mr. Hewitt. These are the resistance of the mercury in the apparatus to the passage of a current until a high potential has been applied and the disappearance of this resistance, when the proper tential has been applied and the disappearance of this resistance, when the propervoltage is reached. The result of this is
that violent and rapid current impulses are
set up in the circuit containing the condenser, and so in the sending wire.

Mr. Hewitt, in his laboratory in the Madison Square Garden, said to-day that he did
not pose as a second Marconi and that he
pretended no such knowledge of wireless
telegraphy as that which was possessed by
the Italian investigator.

GREAT DIFFICULTY OVERCOME. "All I have done," said he, is to perfect a device by means of which messages can be sent rapidly and without the loss of current occasioned by the spark gap. In wireless telegraphy the trouble has been that it was difficult to keep the sending and the receiving instruments attuned. By the use of my interrupter this is easily accompilished.

the receiving instruments attuned. By the use of my interrupter this is easily accompilished.

"When the spark-gap system is employed there is constant waste, for electricity stored in condensers is made to pass between two balls of highly polished metal. The overheating of these metal balls, their corrosion, the action of the air and other causes interfere with the use of the current and as a result the instruments are often not in harmony.

"The interrupter which I have invented has none of these defects. What practical application of it will be made I do not as yet know. I hope that Mr. Marconi will use it. I have been asked if it is possible to send currents of such intensity through the air, why it would not be practicable to transmit power in the same way?. If power were sent in that manner a man who invented a system of sending it by wire would be hailed as a benefactor.

"Power must be sent exactly where it is wanted. While it is true that by changing the number of oscillations it will be possible to insure secrecy in telegraphing. I do not regard secrecy of prime importance Pew persons will take the trouble to find out what is passing through the air, for it would not interest them. Besides, there is not in telegraphy any great demand for secrecy. Messages are intended for only one person, but the sender, as a general thing does not care how many other persons hap pea to read them. It is essential that wire less telegraphy should have an accurate means of transmission."

At the office of the Marconi Wireless Telegraph Company it was said to-day that the matter seemed to be of great hupor tance, and that a copy of the Electric Review, in which the discovery was an mounced, had been sent to the enginer of the first of the promising of the services of the discovery.

1,000,000 A SECOND. The interrupter invented by Mr. Hewis is capable of developing 1,000,000 oscillation a second, and it may start such a disturb sace in the atmosphere when applied fo the purpses of wireless telegraphy that all other currents could be counteracted or destroyed.

ance in the atmosphere when applied for the purposes of wireless telegraphy that all other currents could be counteracted or de stroyed.

In the war between the wireless telegraph companies of the future, it might be possible for the company having the most powerful apparatus to interfere with the sending of all messages in the neighborhood. It is should be necessary to prevent other persons from reading a message in transit complex cipher can be made by changing the oscillations in accordance with a code arranged before sending the messages. It would, of course, be possible for the interlepers to attune their instruments will the oscillations of the sending instrument but it would require at least an hour for the inquisitive operators to get the right cadence, and by that time several change could be made.

Michael I. Pupin, professor of electro mechanics in Columbia University, said today that, while Mr. Hewilt's interrupter did not place wireless telegraphy on a commercial hasis, that it was the greatest step toward that end which had yet been made. "Mr. Marconi," said he, "demonstrated that, under certain conditions, electrical waves could carry a great distance. What was needed was a perfect manner of creating those waves, and that the new mercury vapor interrupter of Mr. Hewitt does admirably. The invention is of such importance that it will place Mr. Hewitt die astudy of electricity.

'The passage of the sparks in the mercury vapor between the two electrodes reminds one of a rapidly acting hydraulic ram. The interrupter applies in a practical manner the discovery of Mr. Hewitt that mercury vapor in a vacuum tube will stand a tremendously high electric tension, and

THINK IT OVER.

Something You Can See in Any Restaurant or Cafe.

A physician puts the query: Have you never noticed in any large restaurant at lunch or dinner time the large number of hearty, vigorous old men at the tables; men whose ages run from 60 to 80 years; many of them hald and all perhaps gray, but none of them feeble or sentle?

Perhaps the spectacle is so common as to have escaped your observation or comment, but nevertheless it is an object lesson which means something.

If you will notice what these hearty old fellows are eating you-will observe that they are not munching bran crackers nor gingerly picking their way through a menu card of new-fangled health foods; on the contrary, they seem to prefer a juicy roast of beef, a properly turned loin of mutton, and even the deadly broiled lobster is not altogether ignored.

The point of all this is that a vigorous old age depends upon good digestion and plenty of wholesome food, and not upon dieting and an endeavor to live upon bran crackers.

There is a certain class of food cranks who seem to believe that ment, coffee and many other good things are rank poisons, but these cadaverous, sickly looking individuals are a walking condemnation of their own theories.

The matter in a nutshell is that if the stomach secretes the natural digestive juices in sufficient quantity any wholesome food will be properly digested: if the stomach does not do so, and certain foods cause distress, one or two of Stuart's Dyspepsia Tablets after each ment will remove all difficulty because they supply just what every weak stomach lacks—pepsin, hydro-chloric acid, diastase and nux.

Stuart's Dyspepsia Tablets do not act upon the bowels and, in fact, are not strictly a medicine, as they act almost entirely upon the food eaten, digesting it thoroughly, and thus given a much-needed rest and giving an appetite for the next meal.

Of people who travel nine out of ten use Stuart's Dyspepsia Tablets, knowing them to be perfectly safe to use at any time, and all hours and all kinds of tyod, the traveling public for years have prined their faith to

New Things for Early Buyers and Choice Bargains for Wide-Awake Patrons

New Dress and Walking Skirts.

admit of detailed description. Every garment a model in fit and workmanship. Prices range from \$5.00 upwards.

New Spring Coats.

In styles and modes that are entirely new. For the ultra fashionable the Taffeta and Peau de Sole Siik Coats, with

elaborate lace trimmings, are much in vogue. Our prices range from \$6.75 upwards.

New Silk Waists. This stock is complete in all new styles of Taffeta, Peau de Soie, China Silk, Peau de Cygne and Crepe de Chine, in all colors. Prices range upwards from \$5.00.

in the Adirondacks.

Glens Falls, N. Y., Feb. 21.—A teamster on the freight line from Long Lake to Little

Tupper Lake reports the presence of a

Tupper Lake reports the presence of a large herd of elk near the latter lake. He was freighting a load of hay to the Little Tupper and stopped over night at a hotel near by. In the morning twenty-three elk were reen around the hay, and a large quantity of it had been eaten.

The elk are undoubtedly a part of the herd which William C. Whitney has placed in the Adirondacks, and which have been seen in various parts of the woods during the winter.

Reports from Newcombs say that deer are so plentiful in the Cold River section that teamsters have to scare them out of the road before they can pass with their leads.

then all at once permit the current which it has withstood to pass. "Although the communication between he two electrodes is difficult to establish, he oscillations may be kept up with a few olts. The invention is the application of a new method of creating electrical waves, or no other words. Mr. Hewitt has applied his swn discovery." HUMAN INDEX A MARTYR TO DUTY

George N. Pike of United States District Attorney's Office, Had Remarkable Memory.

PRAISED BY CABINET MEMBERS.

commerce of the United States is resuming its normal conditions. The January exports were larger than those of any priceding January in the history of our commerce except those of the year 1901. In which the January figures were about \$2,000,000 above those of last month.

The total value of exports in January, 1903, was \$134,040,362, against \$136,25,601 in January, 1904. States in January, 1905, and \$51,673,689 in January, 1838. Thus the exports in January; 1803, were double those of January, 1803.

Turning to the import side, last month's figures show the largest January imports in the history of our commerce. The total imports in the month of January, 1902, were \$85,109,891. against \$79,139,192 in January of last year, and \$75,168,257 in January, 1803.

For the twelve months ending with January, 1903, the total imports approximate the billion-dollar line, being \$75,283,87, against \$742,068,255 for the twelve months ending with January, 1803. This increase in importations is chiefly due to the continuing demand of the manufacturing interests for raw material from abroad for use in their industries.

In the calendar year 1902, the manufacturers materials imported amounted to \$453,-090,000, against \$321,000,000 in the preceding venr and \$248,000,000 in the calendar year 1932, 184,000,000 in the preceding venr and \$248,000,000 in the calendar year 1936, 840,000 in the preceding venr and \$248,000,000 in the calendar year 1932, 184,000,000 in the calendar year 1932, 184,000,000 in the preceding venr and \$248,000,000 in the calendar year 1932, 184,000,000 in the preceding venr and \$248,000,000 in the calendar year 1932, 184,000,000 in the preceding venr and \$248,000,000 in the preceding venr and \$248,000,000 in the calendar year 1932, 184,000,000 in the calendar year 1932, 184,000,000 in the preceding venr and \$248,000,000 in the calendar year 1932, 184,000,000 in the preceding venr and \$248,000,000 General Burnett Says Few Men Had Such Wonderful Ability for Details as Did His Late Chief Clerk.

REPUBLIC SPECIAL.

New York, Feb. 21.—In the death of George N. Pike the office of the United States District Attorney loses an employe who, because of his phenomenal memory and wonderful grasp of details, was the most valuable clerk ever connected with the office.

An an instant's notice he could recall any one of the many thousand cases or review one of the many thousand cases or review correspondence dating back many years. He virtually carried the business of the of-fice in his head, and his death will cause General Burnett, the District Attorney, no

ittle inconvenience.

"Never," sald General Burnett. "will a more valuable employe than Mr. Pike be found, and it will be many years, if ever, before one is found who can master the little and big things as Mr. Pike mastered them."

before one is found who can master the little and big things as Mr. Pike mastered them."

To his devotion to his work and his untring efforts to keep the affairs of the department in shipshape, is due his shortened life. He worked early and late, staying every day until every ltem had been entered and every book closed. Frequently he stayed hours after the others had gone, perfecting plans for systematizing the work.

The work of the chief clerk in the office of the United States District Attorney of the District of New York is so ponderous as to stagger the average man. There are thousands of complicated cases on hand all the time, and the chief clerk must be familiar with all.

Mr. Pike entered the office in 1836, when a young man, and at once set about systematizing the growing business of the department. He became so essential to the office that during his annual vacation the heads of the office were severely handicapped. Hours were lost in ascertaining details which Mr. Pike could have given them in a second.

When General Burnett wished to know

which Mr. Pike could have given them in a second.

When General Burnett wished to know what disposition had been made of a case rerhaps six months or a year old, one of four or five thousand, he had only to ask Mr. Pike, He could tell without referring to a record.

He was often called the office index, but in entire respect. All the assistants came to him for information, many timer for advice concerning legal procedure, with which the clerk was entirely familiar, ai-

though not a lawyer. In his work Mr. Pike had three assistants. The responsibilities of the position of chief cierk, however, cannot be borne jointly—one man must carry them all borne jointly—one man must carry them

the position of chief cierk, however, cannot be borne jointly—one man must carry them all.

"Few men." said General Burnett, "have such wonderful ability for details as he had, and few have such phenomenal memories. His death will cause us much inconvenience. It will be a long time before the machinery will run as smoothly as it did with Mr. Pike in charge.

The volume of business can be appreciated when it is understood that when I took charge here there were 13,000 cases in the office. Mr. Pike knew them all. He was indeed a femarkable man, and was devoted to his work alone. I believe that his devotion to it shortened his life."

Mr. Pike has been praised and wondered at by members of the Cabinet, as well as by hundreds of prominent attorneys. A few years ago, because of his efficient work, his salary was advanced from \$2,000 to \$2,500 a year. Salary, however, was secondary with him. He lived for his work.

A year ago his health began to fail. He took several rests during the ust year, occasionally at the suggestion of General Burnett, but always returned before he had regained the strength he needed. In addition to kidney trouble, influenza and pneumonia seized him. His death occurred at his home. No. 733 Putnam avenue, Brooklyn.

BABY CRADLED IN SNOW. Wails of Boy Foundling at Maspeth Saved His Life.

REPUBLIC SPECIAL. New York, Feb. 21.—Everybody in Mas-peth, L. I., is mystified by the discovery of a pretty boy baby cradled in the snow at Flushing avenue and Grand street, John Davis, hurrying home through the storm, heard the wall of the infant, picked it out of its bed of white and carried it to the Seventy-reventh Precinct Police Station

the Seventy-reventh Precinct Police Station.

Had he not discovered it just when he did, the snow would have proved its tomb.

The baby was warmly clad, but there was absolutely no clew to its identity. It is a handsome boy, with fine features, light brown hair and time eyes. The boy had on a coat and dress of pink flannel. The undergarments were of fine make and lace-trimmed. White seft woolen stockings. undergarments were of fine make and lacetrimmed. White, soft, woolen stockings
and back shoes were on its feet.

Wrapped completely about the baby was
a fur coak, with a hood that almost covered its face. It was well protected and
was not in the least cold when Mr. Davis
picked it out of the snow.

There is not a mark of writing on any of
the garments it wears to show to whom it
belongs. That it was abandoned is the conclusion of the police.

SING TONG MAN MURDERED. Quong Duck Was Shot to Death and His Slayer Escaped.

REPUBLIC SPECIAL San Francisco, Cal., Feb. II.—Lo Quong Duck, a Hop-Sing-Tong man, was murdered by an unidentified assassin. No one heard the shot or gaw the murderer, except possibly Chinamen, and they never tell. A sibly Chinamen, and they never tell. A Chinaman who must have heard the shot notified Watchmen George Downey, Henry Duffield and Andy Hornsman that something was wrong. The watchmen went up and there was no one on the second flagr of the building. Opening the door of one of the rooms they found Duck lying on his back with a builet hole in his right breast. Officers James Connoily and Ed McNsmara ing room revealed an old Chinaman, whose name is unknown, caimly lying on his couch. He was taken into custody.

The shooting is a result of the truce of New Year's being declared off a few days ago by the rival Hop Sings and Suey Ings. The Hop Sings seem to be getting the worst of the highbinder war, which resulted in six Chinamen being shot during the last three weeks.

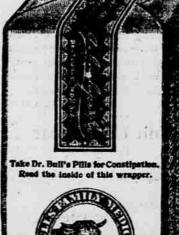

Duck, when peace was declared off the other night, sat in the little cabin of

Watchmen Downey and Finn and seemed very much alarmed at the prospects of a renewed war. He demarked at the time: "Pretty soon somebody die: maybe one-half hour: maybe me die." So terror stricken was the man that Watchman Downey had to accompany him to his room.

The whites in Chinatown do not believe that Duck lived where he was murdered, but was on a visit with some friend when shot.

When the officers arrived the body was still warm.

vanced stages of the disease.

AS PREPARED BY THE

Rev. Dr. J. W. Bull,

Baltimore, Md.

For Sale by all Druggists. Price 25 Cents.

Dr. Bull's

only. Don't let a dealer influence you into buying some cheap substitute when your health or the health of some of your family is at stake. Cured Consumption.

"Dr. Bull's Cough Syrup cannot be beaten. It is the best on the market; for I was troubled with a bad cough for a long time and the doctor said I had consumption, but I heard of Dr. Bull's Cough Syrup, took it and I was well and cured in a week. I have a boy to whom I give Dr. Bull's Cough Syrup every time required and it always cures him too." Mrs. Lillie Curdie, Donora, Pa.

Small dose. Pleasant to take. The accompanying illustration is a facsimile of the genuine package. Sold by all druggists, large bottles, 25 cents. Be sure that the package you buy has the trade-mark "A Bull's Head." Dr. Bull's Cough Syrup cures speedily and will leave the throat and lungs in a healthy and normal condition.

It contains no harmful drugs
